RUTGERSON BATTCAR ROLLER SLIDES

Low Friction - RUTGERSON BATTCAR ROLLER SLIDES

Rutger slides are not suited to all spars but they do offer excellent value for money. These slides are not ball bearing but they do have 4 pressure absorbing wheels that bear on the aft face of the mast. For great value for money low friction slides that work on most spars (especially Selden) for boats up to 40ft we recommend the Rutger slide.

The Battcar itself is manufactured from a unique low friction composite that is also self-lubricating. These new cars can efficiently handle the pressure exerted by the battens on boats up to 40 feet. Rutger's new Battcars also reduce wear thanks to their small size and rounded design. The geometry has been calculated to distribute strain evenly, which minimalises the risk of the slide jamming.
