SAILS

SNUFFER

The Westaway Snuffer is an essential addition to a downwind sail on a short-handed Cruising or Offshore Racing yacht. The snuffer allows the spinnaker or cruising chute to be hoisted whilst contained in a nylon tube. When the tack and sheets are attached and the sail is hoisted - bear away onto a broad reach with the snuffed sail in the lea of the mainsail simply pull on the continuous uphaul/downhaul and hey presto the sail opens up ready to draw. To douse the sail or control the sail reverse the process, by bearing away to a broad reach dump the sheet so the sail is flapping with no load and pull down on the line until the base of the snuffer reaches the foot of the sail.

WESTAWAY

SAILS

Ultra soft white nylon - to enable easy concertining, and white to ensure no dye runs onto sail.

Ultra soft nylon sleeve for the internal line to pass through ensuring there is no chance that the ropes can wrap around the sail.

Fibreglass moulded base to smoothly gather the sail when snuffing.

Large black vertical line top to bottom to allow the user to make sure the snuffer is not twisted.

Lightweight Polypropylene continuous uphaul/downhaul rope.

Generous ring at top of system to allow easy attachment of the halyard.
