Tack stop

Multiple rows of stitching
on seams

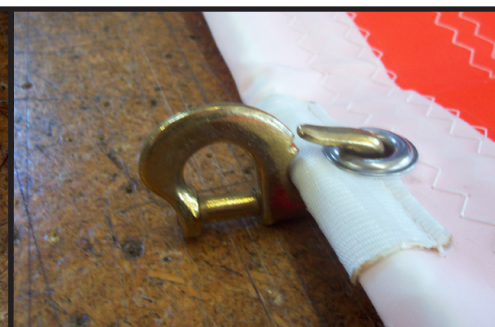

Radial corners patches

Leech reinforcement

Tack hook

Hanks for easy attachment

Westaway Storm sails are not off the shelf, they are custom designed and cut individually to suit the deck and spars. Badly setting Storm Sails are a liability not what you need when your life or your children's life depends on it! Westaway take comprehensive measurements and computer design our Storm Sails just like all other sails and they are built here at our Ivybridge loft. The seams have at least 3 rows of 3-step anti snag stitching for ultimate reliability. Available in High Visibility orange

or top quality premium white rip stop fabric with a large contrasting stripe across the sail. Our Storm sails conform to ISAF, ORC and Charter Coding safety regulations. It is highly recommended that the sail is hanked onto the forestay or a separate dedicated Inner-forestay (usually removable). Sleeves to wrap around a rolled up Genoa are not recommended however in an 'Emergency Just in Case' scenario we can supply optional parallel bead stops to wrap around the rolled up headsail.
